

Summer Math Offerings at Desert Academy

Algebra II

We are offering this course as a 5-week intensive alternative to our regular Algebra II course. We will cover all material fundamental to the Algebra II curriculum, including polynomial functions, exponential functions, matrices and basic probability and statistics. Due to the shortened schedule, enrolled students are required to attend every class unless an absence is excused by the instructor in advance. Successful completion of this course will result in one Algebra II credit.

Dates: Monday – Friday, June 8 to July 10

Instructor: Thomas Christie

Times: 4:30pm to 6:30pm

Price: \$750

Algebra I

This 5-week course is designed for students who are currently in Geometry, but who have not had Algebra I and would like to move on to Algebra II next school year, or for those who are currently in Pre-Algebra and would like to move on to Geometry next school year. We will cover all concepts that a student would cover in a year-long Algebra course. It will be a relatively fast paced course; however, with a small class size students will be provided with more individualized attention. Due to the shortened schedule, students are required to attend every class unless an absence is excused by the instructor in advance. Successful completion will result in one Algebra I credit.

Dates: Monday–Friday, June 8 to July 10

Instructor: Stephanie Binkley

Times: 9:00–11:00 am

Price: \$750

To register, please submit payment in full to Jud Osborn by May 22, 2009. If you need to make special arrangements, or if you have any questions about the courses, please feel free to contact the instructors.
